FILTRATION SYSTEM

Heron has an integrated multi-stage filtration system and post-UV LED steriliser to remove chlorine, bacteria, odours and inorganic impurities. This is to ensure clean and pure water that is safe to drink at all times.

LED DISPLAY PANEL

Time Indicator

Local time will be displayed on the LED screen.

Hot Water

Press this button to select hot water (92°C). A red light will also be lit at the water outlet point to indicate and warn that hot water is dispensing.

Extra Hot / Reboiling Button

Press this button to start and close the reboil function. When the reboiling function is activated, the button shows red until hot water reaches the setting temperature (95°C), and the button light turns back to white again, default light on white.

Cold Water

Press this button to dispense cold water (7-10°C). A blue light will also be lit at the water outlet point to indicate that cold water is dispensing.

Water Volume

Press this button to select the volume of the water to be dispensed (180ml | 220ml | 1000ml).

Dispense Water

Press this button to dispense water upon selecting the temperature and volume. To dispense room temperature water (30-45°C), press this button without selecting any temperature. Refrain from placing finger at the water outlet point as both cold and hot water will be dispensed one after another.

UV Sterilization

Press this button to perform settings for the UV sterilization.

SPECIFICATIONS ✨

Heron is a stylish and compact water dispenser that provides you with purified and clean water. The system is slim, smart and safe for everyday use. Heron provides you with hot (92°C-95°C), room (30-45°C), and cold water (7-10°C). It features an ergonomic touch UI panel giving you multiple options for water temperature and volume. It also incorporates "Twish-N-Turn" filters and a post-UV LED steriliser.

Dimension	W190 x D450x H400
